Subject- Object Oriented Programming through JAVA

EXPERIMENT NO. 2

Aim: Study of Basic Java Programming Constructs

Materials:
1. Editor – Notepad/Notepad++
2. Command Prompt

Name: Saumya Sura	Roll no.: C147
Division: D1	Date of Experiment: 30/1/2026

1. WAP to accept 3 nos. From command line arguments and print maximum,

minimum and total of all three nos.

```
class exp2 {
 public static void main(String[] args) {
 int a = Integer.parseInt(args[0]);
 int b = Integer.parseInt(args[1]);
 int c = Integer.parseInt(args[2]);

 int max = Math.max(a, Math.max(b, c));
 int min = Math.min(a, Math.min(b, c));
 int total = a + b + c;
 System.out.println("Maximum: " + max);
 System.out.println("Minimum: " + min);
 System.out.println("Total: " + total);
 }
}
```

```
PS C:\Users\mpstme.student\Desktop\lab2> javac exp2.java
PS C:\Users\mpstme.student\Desktop\lab2> java exp2 34 45 12
Maximum: 45
Minimum: 12
Total: 91
```

2. Write a Java program that calculates the sum of digits of a given integer.

```
import java.util.Scanner;
class exp2{
public static void main(String[] args) {
      Scanner sc = new Scanner(System.in);
      int num = sc.nextInt();
```

```
        int sum = 0;

        while (num != 0) {
            sum += num % 10;
            num /= 10;
        }
        System.out.println("Sum of digits: " + sum);
    }
}
```

```
PS C:\Users\mpstme.student\Desktop\lab2> javac exp2.java
PS C:\Users\mpstme.student\Desktop\lab2> java exp2
1245
Sum of digits: 12
PS C:\Users\mpstme.student\Desktop\lab2>
```

3. Write a Java program that prints the Fibonacci sequence up to the nth term,

where n is provided as input.

```
import java.util.Scanner;
 class exp2 {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        int n = sc.nextInt();

        int a = 0, b = 1;
        System.out.print("Fibonacci Series: ");

        for (int i = 1; i <= n; i++) {
            System.out.print(a + " ");
            int next = a + b;
            a = b;
            b = next;
        }
    }
}
```

```
PS C:\Users\mpstme.student\Desktop\lab2> javac exp2.java
PS C:\Users\mpstme.student\Desktop\lab2> java exp2
5
Fibonacci Series: 0 1 1 2 3
PS C:\Users\mpstme.student\Desktop\lab2>
```

4. Write a Java program that checks whether a given number is a palindrome or not.

```
import java.util.Scanner;

class exp2 {
   public static void main(String[] args) {
      Scanner sc = new Scanner(System.in);
      int num = sc.nextInt();
      int original = num, rev = 0;

      while (num != 0) {
         rev = rev * 10 + num % 10;
         num /= 10;
      }

      if (original == rev)
         System.out.println("Palindrome");
      else
         System.out.println("Not a Palindrome");
   }
}
```

```
PS C:\Users\mpstme.student\Desktop\lab2> javac exp2.java
PS C:\Users\mpstme.student\Desktop\lab2> java exp2
1221
Palindrome
PS C:\Users\mpstme.student\Desktop\lab2>
```

5. Write a Java program that checks whether a given number is prime or not.

```
import java.util.Scanner;

class exp2 {
   public static void main(String[] args) {
      Scanner sc = new Scanner(System.in);
      int num = sc.nextInt();
      boolean isPrime = true;

      if (num <= 1)
         isPrime = false;

      for (int i = 2; i <= num / 2; i++) {
         if (num % i == 0) {
            isPrime = false;
            break;
         }
      }

      if (isPrime)
         System.out.println("Prime  number");
```

```
	else
System.out.println("Not a prime number");
}
}
```

```
PS C:\Users\mpstme.student\Desktop\lab2> javac exp2.java
PS C:\Users\mpstme.student\Desktop\lab2> java exp2
122
Not a prime number
PS C:\Users\mpstme.student\Desktop\lab2>
```
